2010 SSP Fellows Program

Society for Science & the Public (SSP), with generous support from Intel, is pleased to announce the 2nd year of its Fellows Program. Our goal is to enable Fellows to guide students in producing project-based research of the highest quality, such as is submitted to SSP's premiere science competition, the Intel Science Talent Search.

The SSP Fellows Program will attract the most creative and motivated high school science and math teachers in the country. The SSP Fellows Program provides funds and training to selected U.S. science and math teachers who serve under-resourced students, to enable interested and motivated students to perform high-quality independent scientific research.

Through a competitive selection process, the Program will provide teachers the financial and training resources necessary to support and inspire the success of their most enthusiastic science and math students. Fellows may serve for up to four years.

2010 Application opens online November 16, 2009
